Abstract

'EventsHap – The Website which is designed to assist people in finding rejuvenating and fruitful activities.' People during their leisure time usually find it difficult to search for some events or activities to attend. Since there is no platform that can notify them about the activities happening in the nearby areas. Majority of people finds it tough to figure out what to do on the weekends. Hence, resulting in waste of time.

Whether it's a weekend or weekdays, Events like gaming tournaments, marathons, cyclothon, concerts, etc. take place on regular basis, which are used to fill the empty spaces of lives. Through this website the user can easily find events happening around them.

In the existing event related websites even if they cover nearby events, there are many errors regarding online registration and transactions. User also experiences bad customer services. The information or suggestions provided are not matching or satisfying to the customer demands or expectations. Sometime they just pick some random information and exaggerate it. We also provide a map which shows events occurring nearby.
